Engineering DIY Workshop 2018

Topic: Make an On Screen Piano to Play Your Favorite Music

29 September 2018 (Saturday), Rm 4213

Dr. Desmond Tsoi

Department of Computer Science & Engineering
The Hong Kong University of Science and Technology
Hong Kong SAR, China
Instructor

Dr. Desmond Yau-chat TSOI (Simply call me "Desmond" ;))

- Personal website: http://www.cse.ust.hk/~desmond
- E-mail: desmond@cse.ust.hk
- Office: Rm 3553 (Lift 27-28)
Student Helpers

- CHAN, Ho Ting
- CHIU, Chi Fun
- CHIU, Ka Ho
- CHIU, Ka Wa
- CHUNG, Pak Ho
- HE Jianle
- HEUNG, Shui Leung
- HUI, Yun Fung
- KRISHANDI, Hans
- LAM, Kwun Yuk
- LEUNG, Yiu San
- NI, Xiaoyuan
- PRATAMA, Nicky
- SEE, Cheuk Nam
- SUN, Yushi
- SUNG, Ka Ho
- WONG, Ka Yiu
- WU, Po Man
- YEUNG, Cheuk Man
- ZHANG, Chi
- ZHANG, Ziyan
Software

- In this workshop, you are going to use Greenfoot to construct an on-screen piano
  - Greenfoot is an interactive Java development environment for development of two-dimensional graphical applications, e.g., simulations and interactive games
  - Link to official site: https://www.greenfoot.org/
Things to Do

1. Visit the Workshop Website
2. Download the Skeleton Code (middle icon)
3. Start Greenfoot (Please follow the verbal instructions)
4. Load up the code page:
   http://www.cse.ust.hk/~desmond/info-day-workshop/code/

Note

Please keep your browser open as you need to refer to the code from time to time
Goal: Make an On-Screen Piano to Play Music

Click ‘Run’, then use your keyboard to play.
How? Two Files: Piano.java and Key.java

A piano has a collection of keys (white and black keys)
Five Parts

I. Making a white key
II. Making two white keys
III. Making all white keys (12 in total)
IV. Making all black keys (8 in total)
V. Making a music player
Part I

Making a White Key
What is given?
What is given?

- Piano Class (Right-click Piano icon and select “Open editor”)

// (World, Actor, GreenfootImage, and Greenfoot)
import greenfoot.*;

class Piano extends World {
    /*
    * Create the piano.
    */
    public Piano() {
        super(800, 340, 1)
    }
}

Rm 3553, desmond@cse.ust.hk
Engineering Workshop 2018
What is given?

- **Key Class** *(Right-click Key icon and select “Open editor”)*

```java
import greenfoot.*;

public class Key extends Actor {
    /*
     * Create a new key.
     */
    public Key() {
    }

    /*
     * Do the action for this key.
     */
    public void act() {
    }
}
```
Run it

- Press "Run"
- Right-click the "Key" icon and select "new Key()"
- Place the key on the piano

Problem

No response when we press keys! :(  

Rm 3553, desmond@cse.ust.hk

Engineering Workshop 2018
**Update** the `act()` method of Key class with the following

```java
// This method is called whenever
// the "Act' or 'Run' button gets
// pressed in the environment

gpublic void act() {
    // Check if key "g" is pressed
    if(Greenfoot.isKeyDown("g")) {
        // change to gray image
        setImage("white-key-down.png");
    }
    else {
        // change to original image, i.e. white
        setImage("white-key.png");
    }
}
```
Oops...

Problem
Key always Down for First Press! :( (Some versions of Greenfoot may not have this problem)
Change Once Only: boolean isDown

- Update the act() method of Key class again with the following:

```java
public void act() {
    // if( not is Down and "g" is down )
    if( !isDown && Greenfoot.isKeyDown("g") ) {
        setImage("white-key-down.png");
        isDown = true;
    }

    // if( isDown and "g" is not down )
    if( isDown && !Greenfoot.isKeyDown("g") ) {
        setImage("white-key.png");
        isDown = false;
    }
}
```

Run it again and press "g". It should work! :)

Problem

No sound! :(
Produce the Sound

- The sounds folder has a collection of sound files, each of which contains the sounds for a single piano key.
Play the Note

- **Add** `play()` method to the `Key` class **as follows**

```java
// (World, Actor, GreenfootImage, and Greenfoot)
import greenfoot.*;

public class Key extends Actor {
    // ...

    /**
     * Play the note of this key.
     */
    // Add the following code to the "Key" class
    public void play() {
        Greenfoot.playSound("3a.wav");
    }
}
```
Play the Note if "g" is down

- Put `play();` after the line `setImage("white-key-down.png");`

```java
public void act() {
    // if( not is Down and "g" is down )
    if( !isDown && Greenfoot.isKeyDown("g") ) {
        setImage("white-key-down.png");
    }
    // -----------------
    // Add play() here
    // -----------------
    play();

    isDown = true;
}

// if( isDown and "g" is not down )
if( isDown && !Greenfoot.isKeyDown("g") ) {
    setImage("white-key.png");
    isDown = false;
}
```

*Run it again and press "g". It works! Perfect! :)*
Add More Keys

- Now, add two keys and see what happen

Problem

All keys react the same way > . <
Part II

Making Two White Keys
Add two more variables and update Key(...) method

```java
public class Key extends Actor {
    private boolean isDown;
    // Add two more variables
    private String key;
    private String sound;

    // Update the Key() method
    public Key(String keyName, String soundFile) {
        key = keyName;
        sound = soundFile;
    }

    public void act() {
        if(!isDown && Greenfoot.isKeyDown(key)) {
            setImage("white-key-down.png");
            play();
            isDown = true;
        }
        if(isDown && !Greenfoot.isKeyDown(key)) {
            setImage("white-key.png");
            isDown = false;
        }
    }

    public void play() {
        Greenfoot.playSound(sound);
    }
}
```
Try: Add First Key

- **Right-click “Key” and select “new Key”**
  - Enter “g” and “3a.wav”

3a.wav is “Do” sound
Try: Add Second Key

- Right-click “Key” and select “new Key”
  - Enter “h” and “3b.wav”
  
midi.png is “Rei” sound

Run it again. Press ”g” and ”h”.

Rm 3553, desmond@cse.ust.hk
Add a Key at Specified Position When the Program is Run

- Use **addObject** method provided by Greenfoot
- The following statement add a Key at (300, 180) and link it with key “g” and sound file “3a.wav”

```java
addObject(new Key("g", "3a.wav", 300, 180))
```

- **Update Piano()** of Piano class with the following

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        // Add the following line
        addObject( new Key("g", "3a.wav"), 300, 180 );
    }
}
```
Run It and See What Happen

Problem
Not in a nice position
Need Some Arithmetic!

The Key is 63 x 280
Therefore the Center of the Key Would be 31 \( \frac{1}{2} \) x 140
Update Piano() of Piano class again

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        // Add the following line
        addObject( new Key("g", "3a.wav"), 32, 140 );
    }
}
```

Run it and see
Add Another Key

- **Update** Piano() of Piano class again

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        addObject( new Key("g", "3a.wav"), 32, 140 ); // First Key
        addObject( new Key("h", "3b.wav"), 32+63, 140 ); // Second Key
            // Shifted 63 units
    }
}
```

- **Run it and see**

![Image of Greenfoot 3 piano-AllWhiteKeys](Image)
Part III

Making All White Keys
Add All 12 White Keys

- Update Piano() of Piano class as follows

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        for(int i=0; i<12; i++) // Repeat 12 times
            addObject( new Key("g", "3a.wav"), 32, 140);
    }
}
```
Problem
Oops... all overlapped
Add All 12 White Keys

- Update Piano() of Piano class

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        for(int i=0; i<12; i++)
            addObject( new Key("g", "3a.wav"), 32 + i*63, 140);
    }
}
```
Run It and See

Problem
Hmm... better, but not perfect!
Add All 12 White Keys

- **Update Piano() of Piano class**

```java
public class Piano extends World {
    public Piano() {
        super(800, 340, 1);
        // Width of piano: 800
        // Width of 12 keys: 12 * 63 = 756
        // Empty space = 800 - 756 = 44
        // Half the space on each side = 44 / 2 = 22
        for(int i=0; i<12; i++)
            addObject( new Key("g", "3a.wav"),
                        22 + 32 + i*63, 140 );
    }
}
```
Run It and See

Problem
Perfect! But ... all keys binded with ”g” and with the same sound file
Make Each Key Different

String[] whiteKeys = { "a", "s", "d", "f", "g", "h", "j", "k", "l", ";", ",", "\"" };

// whiteKeys[3] contains the string "f"
// whiteKeys[6] contains the string "j"
// How about whiteKeys[10]?
How about Notes?

- We can do something similar

```java
String[] whiteKeys={"a","s","d","f","g","h","j","k","l",";","'","\\"};

String[] whiteNotes={"3c","3d","3e","3f","3g","3a","3b","4c","4d","4e","4f","4g"};
```

- Update Piano class as follows:

```java
public class Piano extends World {

    private String[] whiteKeys
        = { "a", "s", "d", "f", "g", "h", "j", "k", "l", ";", ";", ";" \};

    private String[] whiteNotes
        = { "3c", "3d", "3e", "3f", "3g", "3a", "3b", "4c", "4d", "4e", "4f", "4g"};

    public Piano() {
        super(800, 340, 1);
        for(int i=0; i<12; i++)
            addObject( new Key(whiteKeys[i], whiteNotes[i] + ".wav"),
                22 + 32 + i*63, 140);
    }
}
```
Run It and See

Your First Workable Piano. Play!! :D
Part IV

Making All Black Keys
Can Include Black Keys - Different Key Images

- First, **add two variables** and **update Key(...) and act() method** as follows:

```java
public class Key extends Actor {
    private boolean isDown = false;
    private String key;
    private String sound;

    // Add two more variables below
    private String upImage;
    private String downImage;

    public Key(String keyName, String soundFile, String img1, String img2) {
        key = keyName;
        sound = soundFile;
        upImage = img1;
        downImage = img2;
        setImage(upImage);
    }

    public void act() {
        if(!isDown && Greenfoot.isKeyDown(key)) {
            setImage(downImage); // Change this
            play();
            isDown = true;
        }
        if(isDown && !Greenfoot.isKeyDown(key)) {
            setImage(upImage); // Change this
            isDown = false;
        }
    }
}
```

Rm 3553, desmond@cse.ust.hk
Next, update Piano class as follows:

```java
public class Piano extends World {
    private String[] whiteKeys = { "a", "s", "d", "f", "g", "h", "j", "k", "l", ";", ";", ";" };;
    private String[] whiteNotes = { "3c", "3d", "3e", "3f", "3g", "3a", "3b", "4c", "4d", "4e", "4f", "4g" };;
    private String[] blackKeys = { "w", "e", ",", "t", "y", "u", ",", "o", "p", ",", "]" } ;
    private String[] blackNotes = { "3c#", "3d#", ",", "3f#", "3g#", "3a#", ",", "4c#", "4d#", ",", "4f#" } ;
    public Piano() {
        super(800, 340, 1);
        for(int i=0; i<12; i++) {
            Key key = new Key(whiteKeys[i], whiteNotes[i]+".wav",
                                "white-key.png", "white-key-down.png");
            addObject(key, 22 + 32 + i*63, 140);
        }
        for(int i=0; i<12-1; i++) {
            // Add another loop to create black keys
            if(!blackKeys[i].equals("")) {
                Key key = new Key(blackKeys[i], blackNotes[i]+".wav",
                                    "black-key.png", "black-key-down.png");
                addObject(key, 22 + (63/2) + 32 + i*63, 86);
            } // Shifted by half-width of white key
        }
    }
}
```

Rm 3553, desmond@cse.ust.hk
Run It and See

Success! Play! :D
Part V

Making a Music Player
Add Methods to Control Key Up and Down

- Add `whiteKeyDownUp` and `blackKeyDownUp` methods to `Key` class

```java
public class Key extends Actor {
    // ...
    public void whiteKeyDownUp() {
        setImage("white-key-down.png");
        Greenfoot.playSound(sound);
        Greenfoot.delay(15);
        setImage("white-key.png");
    }

    public void blackKeyDownUp() {
        setImage("black-key-down.png");
        Greenfoot.playSound(sound);
        Greenfoot.delay(15);
        setImage("black-key.png");
    }
}
```
public class Piano extends World {
    private String[] whiteKeys
        = { "a", "s", "d", "f", "g", "h", "j", "k", "l", ";", ",", "/\"};
    private String[] whiteNotes
        = { "3c", "3d", "3e", "3f", "3g", "3a", "3b", "4c", "4d", "4e", "4f", "4g"};
    private Key[] pianoWhiteKey = new Key[12];
    private String[] blackKeys
        = { "w", "e", ",", "t", "y", "u", ",", "o", "p", ",", "]" }; 
    private String[] blackNotes
        = { "3c#", "3d#", ",", "3f#", "3g#", "3a#", ",", "4c#", "4d#", ",", "4f#" }; 
    private Key[] pianoBlackKey = new Key[11];
    public Piano() {
        super(800, 340, 1); 
        for(int i=0; i<12; i++) {
            pianoWhiteKey[i] = new Key(whiteKeys[i], whiteNotes[i]+".wav",
                "white-key.png", "white-key-down.png");
            addObject(pianoWhiteKey[i], 22 + 32 + i*63, 140); 
        }
        for(int i=0; i<12-1; i++) {
            // Add another loop to create black keys
            if(!blackKeys[i].equals("")) {
                pianoBlackKey[i] = new Key(blackKeys[i], blackNotes[i]+".wav",
                    "black-key.png", "black-key-down.png");
                addObject(pianoBlackKey[i], 22 + (63/2) + 32 + i*63, 86);
            } 
            // Shifted by half-width of white key
        }
    }
}
Add pressKey and playSong Method to Piano Class

- Add `pressKey()` and `playSong()` method to `Piano` class as follows:

```java
public class Piano extends World {
    // ...
    private void pressKey(int i) {
        if (i >= 0 && i < 90) {
            if (i <= 20)
                pianoWhiteKey[i].whiteKeyDownUp(); // i <= 20 are for white keys
            if (i >= 50 && i != 52 && i != 56 && i != 59)
                pianoBlackKey[i-50].blackKeyDownUp(); // i >= 50: some are for black keys
        }
    }

    public void playSong() {
        // Sound of Music
        int[] notes =
            {1,1,2,3,99,1,3,1,3,99,2,3,4,4,3,2,4,99,3,4,5,99,3,
             5,3,5,99,4,5,6,6,5,4,6,99,5,99,1,2,3,4,5,6,99,6,
             99,2,3,54,5,6,7,99,7,99,3,54,55,6,7,8,99,8,7,56,6,
             4,7,5,8,5,3,2,0};

        int i = 0;
        while(notes[i] != 0) {
            if((notes[i] >= 1 && notes[i] <= 12) || (notes[i] >= 51 && notes[i] <= 61))
                pressKey(notes[i]-1);
            else
                Greenfoot.delay(15);
            i++;
        }
    }
}
```
Other Songs

```java
int[] wedding =
{99, 6, 99, 6, 7, 7, 8, 8, 7, 7, 6, 6, 3, 3, 1, 1, 5, 5, 4, 4, 3, 4, 5, 4, 99, 99, 99, 99, 4, 4, 5, 5, 6, 6,
  7, 7, 5, 5, 2, 2, 4, 4, 3, 3, 2, 3, 4, 3, 99, 99, 99, 99, 10, 99, 6, 8, 10, 9, 10, 99, 6, 8, 10, 9, 10,
  99, 6, 8, 11, 10, 11, 99, 6, 8, 11, 10, 11, 99, 4, 3, 4, 5, 5, 99, 5, 6, 5, 6, 3, 99, 99, 99, 99, 10,
  99, 6, 8, 10, 9, 10, 99, 6, 8, 10, 9, 10, 99, 6, 8, 11, 10, 11, 99, 6, 8, 11, 10, 11, 99, 4, 3, 4, 54,
  5, 99, 5, 6, 5, 6, 3, 99, 99, 99, 99, 99, 0};

int[] jasmin =
{3, 99, 3, 5, 6, 8, 8, 6, 5, 99, 5, 6, 5, 99, 99, 99, 99, 99, 99, 3, 99, 3, 5, 6, 8, 8, 6, 5, 99, 5, 6, 5, 99, 99,

int[] happyBirthday =
{99, 5, 5, 6, 5, 8, 7, 99, 5, 5, 6, 5, 9, 8, 99, 5, 5, 12, 10, 8, 7, 6, 13, 99, 11, 11, 10, 8, 9, 8, 99, 0};

int[] ohSusanna =
{99, 1, 2, 3, 5, 5, 99, 6, 5, 3, 1, 99, 2, 3, 3, 2, 1, 2, 99, 1, 2, 3, 5, 5, 99, 6, 5, 3, 1, 99, 2, 3, 3, 2, 2,
  1, 99, 99, 4, 99, 4, 99, 5, 6, 6, 99, 5, 5, 3, 2, 1, 2, 99, 1, 2, 3, 5, 5, 6, 5, 3, 1, 99, 2, 3, 3, 2, 2, 1,
  99, 0};

int[] ShanghaiBeach =
{3, 5, 6, 99, 3, 5, 2, 99, 3, 5, 6, 8, 6, 5, 1, 3, 2, 99, 2, 3, 5, 99, 2, 3, 6, 6, 1, 2, 3, 2, 7, 6, 5, 1, 99,
  8, 8, 6, 8, 99, 6, 8, 6, 5, 5, 3, 6, 5, 1, 2, 1, 3, 99, 3, 3, 2, 3, 99, 8, 8, 7, 6, 99, 3, 3, 2, 3, 8, 7, 6, 3,
  5, 99, 3, 5, 6, 99, 3, 5, 2, 99, 3, 5, 6, 8, 6, 5, 1, 3, 2, 99, 2, 3, 5, 2, 3, 6, 99, 6, 1, 2, 3, 2, 7, 6, 5,
  1, 0};
```
That’s all!
Any questions?

thank you!
